EXAMINER'S AMENDMENT

1. This action is responsive to the following communication: the Amendment filed on 03/09/09.
2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Robert R. Sachs (reg. No 42121) on 06/26/09.

For the purpose of claims interpretation, the examiner interprets the term "computer-readable medium", which was cited in the originally-filed claims, to include only physical storage devices such as CD-ROM, ROM, RAM, magnetic disks.

The application has been amended as follows:

1. Please amend paragraphs [0053] and [0066] as follows:

[0053] Referring now to Fig. 2, there is shown a method of updating a stored proficiency level according to one embodiment. Operating system 101 initiates 202 background process 103 for updating proficiency levels; this may occur, for example, upon system start-up, or upon user

activation, or upon some trigger event. Then, the user runs 203 applications 102 normally. As applications 102 are run, they store in a marker storage device and update various data items that are identified as markers 105. As described above, such markers 105 may be information that is normally stored by applications 102, information that is specifically stored for purposes of assessing user proficiency, or a combination of both.

[0066] As will be understood by those familiar with the art, the invention may be embodied in other specific forms without departing from the spirit or essential characteristics thereof. The particular architectures depicted above are merely exemplary of one implementation of the present invention. The functional elements and method steps described above are provided as illustrative examples of one technique for implementing the invention; one skilled in the art will recognize that many other implementations are possible without departing from the present invention as recited in the claims. Likewise, the particular capitalization or naming of the modules, protocols, features, attributes, or any other aspect is not mandatory or significant, and the mechanisms that implement the invention or its features may have different names or formats. In addition, the present invention may be implemented as a method, process, user interface, computer program product comprising a computer-readable medium, system, apparatus, or any combination thereof. Accordingly, the disclosure of the present invention is intended to be illustrative, but not limiting, of the scope of the invention, which is set forth in the following claims.

2. Please amend the claims as follows (claims that are not addressed here remains the same as filed in 03/09/09 Amendment):

Claim 1 (Currently Amended)

On line 11, please change "an indication of a number of" to "an indication of a total number of"

Claim 46 (Currently Amended)

On line 16, please change "an indication of a number of" to "an indication of a total number of"

Claim 60 is cancelled.

Claim 61 (Currently Amended)

On line 14, please change "an indication of a number of" to "an indication of a total number of"

Claim 75 (Currently Amended)

A computer-implemented user interface configuration method, for configuring a user interface of an application program and a user interface of an operating system of a computer system, the computer system including a plurality of application programs, the method comprising:

determining a user proficiency level with respect to the user interface of the application program and user interface of the operating system based upon a total number of application programs currently open, a historical average number of concurrently open applications, a total

number of windows currently open, and a historical average number of concurrently open windows; and

automatically configuring at least one functional component of the user interface of the application program and at least one functional component of the user interface of the operating system responsive to the user proficiency level.

Claim 76 is cancelled.

Allowable Subject Matter

3. Claims 1-4, 11-24, 26, 28-42, 44-49, 51-57, 59, 61-64, 66-72, 74-75 are allowed.

The following is an examiner's statement of reasons for allowance:

Independent claims 1, 46 and 61, when considered as a whole, are allowable over the prior art of record. Specifically, prior art of record fail to clearly teach or fairly suggest the combination of following limitations:

- determining a user proficiency level with respect to the user interface of the application program and the user interface of the operating system based upon the weighted score; wherein the weighted score is determined by application program markers and operating system marker including an indication of a total number of currently opened application programs;
- automatically configuring at least one functional component of the user interface of the application program and at least one functional component of the user interface of the operating system responsive to the user proficiency level.

Independent claim 75, when considered as a whole, are allowable over the prior art of record. Specifically, prior art of record fail to clearly teach or fairly suggest the combination of following limitations:

- determining a user proficiency level with respect to the user interface of the application program and user interface of the operating system based upon a number of application programs currently open, a historical average number of concurrently open applications, a number of windows currently open, and a historical average number of concurrently open windows;
- automatically configuring at least one functional component of the user interface of the application program and at least one functional component of the user interface of the operating system responsive to the user proficiency level.

The dependent claims further add limitations to the allowable subject matter of the corresponding independent claims; thus are also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
